

AMENDMENTS TO CLAIMS

Claims 1-8 are pending. Claims 9-20 were previously cancelled and claim 22 is cancelled herein. (Applicants reserve the right to file one or more continuing applications for subject matter not allowed in this application.) Claims 1, 2, 3, 5, 8 and 21 were previously presented, and claims 4, 6 and 7 are as originally filed. The below Listing of Claims replaces all prior listings of claims and versions in this application.

Listing of Claims:

1. (Previously Presented): A system for enabling use of a computer terminal in a network to access or otherwise participate in at least one network-related function and a separate voice communication function over the network, comprising:
 - a telephone handset including a microphone and a speaker coupled to provide signals to and receive signals from the computer terminal for the voice communication function;
 - a finger-image sensor coupled at least to provide signals to the computer terminal relating to a finger-image sensed by the finger-image sensor;
 - means for electronically authenticating a finger-image sensed by a finger-image sensor based on the finger-image-related signals provided to that computer terminal;
 - means responsive to the authenticating means for enabling the computer terminal in the network to participate in the voice communication function over the network at least from each computer terminal for which a sensed finger-image was authenticated and access over the network at least one function that is not related to and does not depend upon participation by the computer terminal in the voice communication function.

2. (Previously Presented) The system of claim 1 or 3 wherein the enabling means enables voice communication to and from only each terminal for which a sensed finger-image was authenticated.

3. (Previously Presented) A system for enabling use of a computer terminal in a network to access or otherwise participate in at least one network-related function and a separate voice communication function between computer terminals in the network, comprising:

a plurality of computer terminals in the network, each of which comprises:

a microphone and a speaker coupled to the respective computer terminal to provide signals to and receive signals from the respective computer terminal for voice communication; and

a finger-image sensor at least to provide signals to the respective computer terminal relating to a finger-image sensed by the respective finger-image sensor;

the system comprising:

means for electronically authenticating a finger-image sensed by a respective finger-image sensor based on the finger-image-related signals provided to the respective computer terminal; and

means responsive to the authenticating means for enabling the computer terminal for which a sensed finger-image was authenticated to participate in the voice communication function over the network and access over the network at least one function that is not related to and does not depend upon participation by the computer terminal in the voice communication function.

4. (Original) The system of claim 1 or 3 wherein at least one of the computer terminals includes the means for authenticating.

5. (Previously Presented) The system of claim 1 or 3 comprising a computer in the network, other than the computer terminals, that includes the means for authenticating.

6. (Original) The system of claim 1 or 3 wherein at least one of the computer terminals includes the means responsive to the authenticating means.

7. (Original) The system of claim 1 or 3 comprising a computer in the network, other than the computer terminals, that includes the means responsive to the authenticating means.

8. (Previously Presented) The system of claim 1 comprising a handset incorporating the microphone and the speaker, wherein the handset is keypadless and each computer terminal includes a computer input device by which information for accessing or otherwise participating in voice communications over the network is input to the computer terminal.

Claims 9-20. (Cancelled).

21. (Previously Presented) The system of claim 1 or 3 wherein the enabling means enables voice communication only between terminals for which a sensed finger-image was authenticated.

22. (Cancelled).
